Education

Indian Institute of Information Technology, Nagpur — Nagpur, India
B.Tech in Computer Science and Engineering, CGPA: 8.94 — *Aug 2023 – May 2027*

Indian Institute of Technology, Madras — Remote
Diploma in Programming & Data Science — *Sep 2023 – Sep 2027*

Experience

TruEstate — Bangalore, India
SDE Intern — *Jul 2026 – Present*
- Designed and built the **client-facing website** for **AllDoors**, a core pillar of **iQOL** – owning the **landing and property detail pages** from scratch.
- Led the **NoSQL → SQL migration**, restructuring the property data model and implementing **property name sync** across the platform.
- Integrated a **Typesense** search index on the migrated store to enable fast, typo-tolerant property search.

Comparely — Remote
Software Engineering Intern (LOR) — *Jun 2025*
- Shipped cross-platform mobile interfaces using **React Native** framework and backend services, supporting **500+ active users** with a **35% reduction in API latency**; analyzed usage funnel data with SQL to identify drop-off points.
- Redesigned onboarding UX improving user retention by **30%**; deployed modular services with input validation and centralized exception handling, cutting production error rate by **25%**.

Amazon ML Summer School — Remote
Selected Participant (Certificate) — *May 2025 – Jun 2025*
- Selected among top **5%** applicants out of **60,000+** candidates nationwide for Amazon's flagship ML program.
- Trained by Amazon scientists on **supervised learning, deep learning, and probabilistic models**; built intuition for model evaluation, generalization, and real-world ML deployment.

Projects

RAG-Based Intelligent Document QA System | **Python, GPT-4o, Pinecone, MongoDB, LangChain**
- Engineered a **production-grade RAG pipeline** with **GPT-4o** and **Pinecone** for multi-format document QA, incorporating OCR fallback for scanned inputs and reducing manual review time by **40%**.
- Designed **semantic + exact caching** with MongoDB to cut redundant LLM calls; implemented **vector search and chunking** for efficient retrieval – measuring cache hit rate and latency to iteratively tune thresholds.

Comment Category Prediction | **Python, LightGBM, TF-IDF, scikit-learn, SQL**
- Developed an end-to-end **ML classification pipeline** on **198,000 samples**; used **SQL-based EDA** to surface class distribution and feature correlations before modelling; achieved **Macro F1 of 0.817** with LightGBM, outperforming baselines by $\sim$7%.
- Extracted **20+ features** from metadata (temporal signals, vote ratios, demographic flags); handled 57.66% class imbalance via balanced class weighting and **3-fold stratified cross-validation**.

SyntaxEye – AI Code Review Tool | **React.js, Node.js, Express.js, Gemini API**
- Designed and iterated **structured prompt templates** for the Gemini API to reliably extract feedback on correctness, performance, and security – experimenting with chain-of-thought and output-format constraints to improve response consistency by $\sim$**30%**.
- Built responsive **React 19** frontend with live code editor, PrismJS syntax highlighting, and Markdown-rendered feedback; integrated backend via Node.js/Express REST API.

OpportunityHub – Placement Portal | **Python, Flask, SQLite, Jinja2**
- Developed a full-stack placement system supporting **3 user roles**; wrote **SQL queries for application tracking and reporting dashboards**, modelled normalized relational schema with indexing, cutting query load times by **35%**.
- Structured **RESTful endpoints** for job postings, application tracking, and role-based access control; secured platform with session-based authentication and input validation.

Technical Skills

Languages: Python, SQL, JavaScript, C
AI/ML: LangChain, RAG, Pinecone, GPT-4o, LightGBM, TF-IDF, scikit-learn, Gemini API, LLM integration, Prompt Engineering
Automation & Workflows: OpenAI API, REST API integrations
Frameworks: Flask, React.js, React Native, Express.js, REST APIs
Databases & Search: PostgreSQL, MongoDB, MySQL, SQLite, Redis, Firestore, BigQuery, Typesense
Cloud & Tools: Google Cloud Run, Git, Linux, Docker, Postman, Tailwind CSS

Achievements & Leadership

- **LeetCode Knight** – Solved **500+ problems**; max rating **2006**, top 5% globally
- **Runner-Up, Women in Dev 2024 – Tantrafiesta, IIIT Nagpur** – Built AASA, a real-time safety platform using **location data analytics** (danger zone heatmaps), anonymous peer support chat, and OAuth authentication .
